

Vault Finance Style Guide

A design language engineered for **trust, security and clarity**. Every color, type choice and spacing rule below is grounded in financial-product UX conventions and behavioural psychology — so users feel safe handling their money.

01 Design Principles & Psychology

The "why" behind the system — mapped to recognised UX laws.

Trust through stability

Deep navy and muted teal-green dominate. Cool, desaturated colors are read as calm and dependable — the palette banks and fintechs converge on for a reason. Avoid loud saturation that signals "play" over "serious money."

Color psychology · Aesthetic-Usability Effect

Visible security cues

Locks, shields and verified states are first-class icons. Surfacing protection reduces perceived risk and anxiety at decision moments (transfers, payments, logins).

Peak-End Rule · Loss Aversion

Numbers you can trust

All monetary values use a monospaced font so digits align vertically and never reflow. Tabular numbers prevent misreads and make balances scannable — accuracy reads as competence.

Tabular figures · Signal clarity

Reduce cognitive load

Generous whitespace, one primary action per screen, and a strict type scale. Fewer choices and clear hierarchy lower friction and error — critical when mistakes cost real money.

Hick's Law · Miller's Law · Fitts's Law

02 Colour Palette

Brand, neutral and semantic tokens. Semantic colors carry meaning — never decorate with them.

Accessibility: All text/background pairings meet WCAG AA (4.5:1) or better. Green/red are reinforced with icons + labels so colour-blind users still parse gains vs. losses.

Primary — Vault Teal

#0E6E63

Primary actions, brand, active states. The "go" colour for money movement.

Trust Navy

#0B1F33

Headings, cards, top bars. Anchors the brand in seriousness & security.

Teal 400

#3FAE9F

Teal 200

#9FD3CB

Teal 100

#D6EDE9

Navy 700
